Q1. Operators in Python

ANSWER

Operators are special symbols used to perform operations on variables and values

Types:

addition +
subtraction -
multiplication *
division /
modules %
exponent **
floor division //

Q2. Operators

ANSWER

** is exponent it raises the number to a power
/ is division it returns the quotient as a float
% is modules
// is floor division returns only the integer part
examples :
2**3 is 8
10/3 is 3.333333333
10%3 is 1
10//3 is 3

Q3. for and while loop

ANSWER

Both for and while loop are used to repeat a block of code.
but they work differently.
→for loop
used when the no.of iterations is known
iterates over a sequence
automatically moves the next item
less chance of infinite loop
→while loop
used when the no.of iterations is unknown
repeats as long as condition becomes true

Q4. range()

ANSWER

Used to generate the sequence of numbers. It uses for loop.
range(5)=0,1,2,3,4
range(1,6)=1,2,3,4,5
range(1,10,2)=1,3,5,7,9

Q5. String

ANSWER

A string is a sequence of characters enclosed in ' ' or "" or """"
string is immutable.
string cannot be changed.

Q6. String Slice

ANSWER

1. ython
2. nothyp
3. pto
4. hon

Q7. List

ANSWER

list is a collection of items stored in a single variable
list is mutable
list :
collection of items
written using []
mutable
can store diff data types
string:
collection of characters
written using " "
immutable
stores only character

Q8. List Slice

ANSWER

1. [30,40,50,60]
2. [10,20,30,40]
3. [10,30,50,70]
4. [70,60,50,40,30,20,10]
5. [40,50,60]

Q9. Index

ANSWER

positive indexing:
starts from the beginning
first index is 0
used to access elements from left to right
negative indexing:
starts from the end of the sequence
last index is -1
used to access elements from right to left
examples:
s=python
print(s[0])
output : 3
print(s[-1])
output : n

Q10. length

ANSWER

len()
returns the total number of elements/characters
it is a function
works with lists,strings etc....
example : s="python"
output: 6
count()
returns the number of times a specific elements occurs
it is a method
work on lists,strings etc..... to count the given value
